

Ben,

They have changed info on the data they originally submitted to me, below is the information of output power and ERP for the system they are attempting to license in Grand Prairie. Do you want me to amend the application accordingly to the new data supplied?

Claude

NEW = 40W max

Output Power = 1W (min) – 5W (max)

Antenna Gain = 8.85dB to 9dB

ERP = 8W (min) to 40W (max)
