

Exhibit 3

Expedite Request

We, the Lockheed Martin Corporation, would like to request an expedited handling of this application. This request is based on our desire to operate properly under the guide lines contained in the Frequency allocation tables in Part 2 of the CFR Title 47. Due to our initial concerns of operations area availability based on the information contained in the CFR Part 2 relating to the desired frequencies of operations for this program and the time entailed in trying to obtain a determination if it was possible to operate at our first choice of operations, we have been delayed in filing this application. This request is for short term operations under an STA and is critical to our planned tests procedures. An early determination on our application will allow us sufficient time to establish our corporate required security procedures during the testing and transportation of the data to our test labs from the field tests.

The reasons for selecting the AZ is as follows:

We would like to operate in AZ because the LM Goodyear plant will be where we do the signal processing from the data collects. The amount of data will be huge and consist of about 30 disk packs. Rather than operating in another part of the country and then using commercial transport, with all the inherent problems (e.g. loss of the equipment, baggage mis-handling, potential for disk drive damage in transit, etc.) we would like to stay close to (and land at) Goodyear, AZ.
