

Exhibit C

Antenna Details

Is a directional antenna (other than radar) used? Yes, Transmit and Receive antenna is the same unit aligned at a passive radar cross section target mounted on a 7.92-m pylon located 914.4-m away at a vector heading of 146-deg 56-min south-east of north.

Exhibit submitted: Yes/No

(a) Width of beam in degrees at the half-power point:

	HORIZONTAL	VERTICAL
Frequency (MHz)	HPBW (degrees)	HPBW (degrees)
4000.0000	2.0730	1.0365
8000.0000	1.0366	0.5183

(b) Orientation in horizontal plane: 146-deg 56-min southeast of north (See attached document: horizontal_drawing_20110719.jpg)

(c) Orientation in vertical plane: 0.0-deg elevation (parallel to ground-reflection plane) at height of 1.272-m (See attached document: vertical_drawing_C_20110718.jpg)
