

Exhibit B

Lockheed Martin requests a 24 month new license for a manually adjusted transmitter test range to verify ESM receiver systems for the US Navy on vessels being deployed overseas.

Single test frequencies and ranges are required to evaluate a Navy monitoring receive antenna and detection system called "ESM", to improve defense capabilities of the United States NAVY.

This work is to be undertaken under a US Navy contract N68786-06-C-6205 with the NAVSEA Program Management Office:

Naval Sea Systems Command
ATTN PMS 435/ Scott Hastings
614 Sicard Street SE Stop 7027
Washington Navy Yard, DC 20376-7027
