

Project Description

Proposed testing will allow Lockheed Martin to integrate radar sensors for coastal and border surveillance systems applicable to both domestic USA and international clients.

Model #STS-12000 is a Commercial Off The Shelf (COTS) ground based radar that Lockheed Martin plans to integrate and verify detection performance for systems with applications in homeland boarder protection and security.

A radar in an existing radar test pad facility will be used for test bed integration, demonstration, USG proposals, and software testing.
