

Program Description

The license request is in support of a mission data link for the Sniper ATP test program under sponsorship of the USAF Special Programs Office. Sniper is an electro-optical target acquisition and designation system that incorporates day/night video sensors, laser range-finding and targeting capability, a data recorder, radio communications, and supporting equipment. The mission data link is under development, for the purpose of expanding the radio communications link with new available ground stations. The hardware requiring licensing consists of an analog/digital modem, solid state power amplifier and multiband antenna.
