Project Description:

The Tactical Technology Office (TTO) of the Defense Advanced Research Projects Agency (DARPA) has the objective to demonstrate a vehicle that provides the warfighter terrain-independent mobility. The primary focus of the ARES Program will be the development and demonstration of an integrated suite of critical technologies that enable VTOL capability, efficient flight performance, and a combat range comparable to today's rotorcraft. The concept includes demonstration of the modular features that allow the system to transport a variety of payloads. This contract is administered by the Air Force Research Laboratory (AFRL).

This project is a ground test of Air Vehicle. The radio communications is essential for command and control (C2) and telemetry monitoring of test vehicle. No C2 or telemetry capability at this location.

Contract Number: FA8650-10-C-7069
