---

Message:

This request is for the continuation of work being performed under the license, WF9XCG, in 2011 conducting tests with local law enforcement officials and Federal Border Patrol authorities on the applicability of tactical cellular systems to support border security and drug interdiction operations.

LM in operating in concert with the referenced law enforcement partners has deployed a solution on the US border to provide a greater level of connectivity and availability of sensor information to agents on the ground. We are testing to determine the viability, accuracy and increased efficiency of border security operations with the use of targeted cellular systems. Further testing of the systems deployed in 2011 was requested by the referenced law enforcement partners for further analysis and required by LM testing due to severe weather issues and subsequent equipment delays early in the 2011 testing window.
