

**PURPOSE OF MODIFICATION
(CALL SIGN WK2XYO)**

Lockheed Martin Corporation is currently operating an experimental system under license WK2XYO in support the Extended Range Guided Multiple Launch Rocket System (ER GMLRS) project (U.S. Government contract W31P4Q-19-C-0065).

By the instant modification, Lockheed Martin seeks to make two changes to its application:

- (1) **Add frequency 5800.0 MHz**, with identical parameters and use to what is authorized for the other C-band channels.
- (2) **Add 425.0 MHz**, as a very low-power signal to activate a tone generator.
