To whom it may concern:

These statements are submitted as exhibit information under paragraph 7 of the form 442.

The request for this license is coming from the need to employ equipment manufactured by Orthogon Systems which uses the frequency ranges of 5.470 GHz to 5.725 GHz.

The use of the network link is to stand up a broadband network link between a site in Ashburn located at N39° 00.326' W77° 26.743' to Waterford at N39° 11.281' W77° 34.504'.

The purpose is to provide high speed internet access to government facilities (fire / rescue / police), businesses and residences in the greater Lovettsville and Waterford areas where options for internet access are either unacceptable (dial / satellite) or non-existent.

The Orthogon equipment is already employed by our company in a different spectrum and we find them to work as advertised and friendly to other equipment operating nearby.

Regards,

John Westerman
