

Request for Modification of Station License

Magnolia Broadband, Inc. ("Magnolia") hereby requests a modification of its experimental license (Call Sign WC2XWG) to increase the authorized power at its fixed location from 1.22 Watts (ERP) to 50 Watts (ERP) on its PCS band frequencies. The purpose of this modification is to allow Magnolia to utilize operational power approximating that of a commercial PCS base station as it continues its experimental program utilizing non-type accepted equipment. Magnolia will coordinate this proposed power increase with other users in the band before commencing experimental operations. All other particulars regarding its experimental program, as previously disclosed the Commission, remain the same.
