

Maritime Training is a school that teaches a USCG approved course in the GMDSS. We have a live radio station that includes a standard commercial marine Inmarsat C unit manufactured by SEA (Data Marine Industries). During this class we use this equipment to demonstrate to the student the proper set up for receipt of maritime safety broadcasts, and do a link test on an average of twice a month. We only operate on the bandwidth assigned to marine Inmarsat communications and do not foresee any potential for harmful interference with other users.
