**NEED FOR NATIONWIDE EXPERIMENTAL LICENSE:**

Mark IV develops and manufactures transponders and readers suitable for North American customers and all Intelligent Transportation Systems applications that make use of Dedicated Short Range Communication technology. We wish to obtain a nationwide FCC Experimental License for the purposes of legally demonstrating technical capability of our existing products and products in development on short notice at varying locations nationwide, including trade shows, customer facilities (such as toll plazas, weigh stations, roadside of highways, etc.) and other venues as dictated by competitive market requirements.
