Message:

Hello Behnam,

Answer for question 1:

Our CBRS Category A radios are controlled by CU (Control Unit). The CU is interfacing with Domain Proxy which communicating with CommScope SAS to get a frequency of operation not used by Tier 1 incumbents and Tier 2 Priority Access License (PAL) users.

Answer for question 2:

In addition to SAS, we need to scan across the CBRS frequency band with spectrum analyzer with low noise amplifier (LNA) and antenna for list of frequencies used by General Authorized Access (GAA) users to avoid for co-existing.

If you have additional questions, please let me know.

Thank you very much!

Best Regards,
Tuyen Banh
