---

Message:

The US Army is wanting to utilize it for experimentation during PCC6. It will not be constantly transmitting and will be regulated by the spectrum managing team at National Training Center and by the PC-C6 event spectrum managers as well. The "electromagnetic attack operations" referenced simply reference enabling US Army personnel to conduct 802.11 network access operations (network scan, port scan, network association etc) on local wifi networks set up specifically for this exercise. This will not involve "jamming". Please let me know if this doesn't answer the question. Thanks!
