Subject: FCC File No. 0092-EX-CN-2018

---

Message:

When airborne, which will only occur at the Ft Devens location (centered around NL 42-29-33; WL 71-40-21), the radar will be onboard a controlled unmanned aircraft (operating in restricted airspace). The platform will always be below an altitude of 2000 ft AGL.

At all other times and locations the radar will be operating from the ground (20 ft above the ground or the top of a building).
