Request for Info - STA File # 0382-EX-ST-2003

Message:

Motorola will not only be using this system for the FTAA Convention we also plan to use the site in Miami for testing, demonstrating and showcasing our 700 MHz communications system. By this application Motorola seeks to construct a site in Miami, FL to test and demonstrate prototype equipment for public safety use. The purpose is to evaluate its functionality and acceptability prior to obtaining equipment authorization. Grant of this STA will serve the public interest, necessity and convenience as it allows Motorola to develop and improve equipment used to meet vital public safety needs.

Motorola realizes that the operation of any equipment under experimental authority must not cause harmful interference to authorized facilities. It will coordinate its activities with any licensee in the proposed bands in accordance with FCC requirements. Should any interference occur we will take steps to resolve immediately.

We are requesting this STA for a period of three months.
