

REQUEST FOR EXPEDITED TREATMENT

As discussed in the accompanying "Narrative Statement," Motorola is actively involved in the research and development of hardware and software solutions associated with communications systems that would operate in the 57-64 GHz band in compliance with the current regulations as well as the pending FCC services rules for this band.¹ Motorola's objective is to be able to offer a timely FCC-certified solution to the marketplace. The tests are intended to facilitate evaluation of the use of the band for various applications, as well as testing prototype solutions for the band. The experimentation would also yield benefits for the development of wireless broadband capabilities incorporated not only into consumer products, but also public safety, government, and military communications systems.

Motorola was recently asked to conduct a demonstration for customer acceptability at sites in Phoenix, Arizona, and Lake Mary, Florida, beginning on **February 1, 2008**. Accordingly, Motorola respectfully requests expedited treatment of its application for experimental authority so that it may commence the demonstration as requested. It is unable to re-schedule the test, as the representatives attending the demonstration cannot readily participate at another time. In addition, Motorola seeks to provide actual test data at the meetings to be held during the weeks following that test.

Also, please note that Motorola does not propose to market, sell, or lease prototype equipment to end users. Moreover, no fees will be charged to entities evaluating the equipment during this test. After the experimentation ceases, Motorola will recall and recover all devices.

Motorola submits that expedited processing of its request for an expedited treatment is in the public interest, convenience, and necessity, as it will permit Motorola to develop innovative equipment that will accommodate the communications needs of its customers and, ultimately, their end-users.
