

Experimentation Description

The purpose of Navini Networks's experiment on 3400 MHz to 3600 MHz band is to for developing Wimax products that will be exported to European and Australian.

The testing will be done for short periods (several days per month) and not operated constantly. The equipment will be turned off when testing is not being conducted.

No equipment will be developed for use in the US sales from 3400 to 3600 MHz.
