FCC File # 0177-EX-PL-2005

---

Message:

Persuant to our phone conversation, I would like to amend the application as follows:

The equipment will be both a single base station and up to five subscriber units. The equipment is IEEE 802.16a (WiMAX) compliant hardware.

The base station is a fixed unit located at the coordinates listed in the application.

The subscriber units are small (12 in x 12 in x 2 in) devices that will be placed at various locations around the city. Each subscriber unit will be within 5 km of the base station.

Testing will involve basic IP connectivity from the subscriber to the base station (when the data center for the City of Beverly Hills is located), as well as bandwidth/throughput testing, delay and jitter testing, and Voice over IP (VoIP) testing. Subscriber mobility (within the 5km radius) testing will also be included in the test suite.
