Subject: RE: Please confirm as soon as possible

Claudia,

my understanding is that the demonstration is done inside a trailer and the power level does not need to be more than what is required to operate within a few feet. I understand Carl's concern as 0.251 mW (-6 dBm) is very low but according to Merji's NRC contact this will be enough.

Lauri

While I'm happy to authorize 251 uW, you sure this is what they want?

If it qualifies.
However, I would be happy to go on line right away to make the amendment.
