EXHIBIT B**Supplementary Technical Information**Tolerance

In the frequency data field submission, under “Tolerance” a “0” value was entered for each frequency. This was due to the inability to enter a range of tolerance power variation. The actual tolerance power variation is +0/-2dB.

Necessary Bandwidth

In the emissions data field submission, under “Necessary Bandwidth” the following values were given: 1MHz; 500 kHz; and 16.6 MHz. Due to the inability to enter a measurement reference for each bandwidth value, none was given. The aforementioned bandwidth values should be associated with the following measurement references, respectively: 20 dB; 6 dB; and 26 dB.
