

To whom it may concern:

We are requesting the expedited STA request as a result of recently finding out that our radios would not tune to the frequencies we were licensed for at the CTIA tradeshow in Las Vegas, Nevada, which also starts tomorrow thru April 9<sup>th</sup>. . The frequency range we were licensed for was 746 – 758 MHz. The new frequency range we are requesting is 698 to 710MHz.

We apologize for any inconvenience this may have caused, and we respectfully request the FCC authorization to change to the new frequency range for our DVB-H demonstration.

Thanks.
