

Response to Question 7, Description of Experiment

The Furuno commercial marine radar model DRS4D will be used as a known and controlled source for electronic warfare system development. One set of hardware will be installed in up to four different locations around the Northrop Grumman campus in Linthicum and Hanover, Maryland. This equipment will be used as a commercial test item with no modifications to support system development for U.S. Government (DOD) programs. This is a land-based application for a commercial marine radar.
