

Oceus Networks
Experimental License 0602-EX-PL-2012
EXHIBIT 1

Describe the purpose of the application.

Oceus Networks Inc. was previously Ericsson Federal Inc. and has been established as an independent US company with the charter to provide broadband solutions in the government sector. Oceus Networks is the approved provider of Ericsson communications technologies for the U.S. Federal Government. This includes quickly deployable 3G and 4G mobile communication solutions.

As part of its solution development activities, Oceus Networks periodically tests and demonstrates its technologies for collaborators, customers, regulators and other government representatives, primarily in the DoD. These products are transportable network solutions that are ideal for mobile units and field operations that require quick set-up and high bandwidth data capabilities.

Oceus Networks uses the approved experimental license 0017-EX-PL-2011 for the purposes described above for LTE FDD bands. We now also have the need to demonstrate this technology using frequency bands defined for LTE TDD. Should the FCC grant this Oceus Networks request for a nationwide license for these additional frequencies, Oceus Networks will coordinate with existing and adjacent licensees prior to demonstrations in a particular location as required as we have done with the frequencies included in the previous license.
