Our Reference FR/JL-1102/46

Dear Sirs

Further to application for a Special Temporary Authority for one Pipe Hawk GPR unit to be imported and utilized within the requested States of the US.

I writ to confirm that exact street locations are currently unavailable as the Gas utilities within our requested states have changing work requirements almost on a daily basis. Though they have requested our immediate assistance to position missing plastic gas pipes for specific projects there will be many instances where they will require deployment to other areas of their gas distribution network. One of these specific projects requires positioning 5.9 miles of missing main and the associated service connections. It will be almost impossible for us to specify exact street locations for every day of use.

We would be happy to provide a cell phone number for the operator using the equipment in each state so you could confirm where the unit is in operation each day. We would also be happy to provide you with a detailed report showing where and when the unit was utilized each day. We could keep this log for your request or fax it to you on a weekly or daily basis subject to your request.

In an attempt to reduce the operational territories to more specific regions we can confirm that the Pipe Hawk unit would be utilized within the gas network distribution areas of: WE Energy – Wisconsin, NICOR – Illinois, NY GAS group – New York State, Columbia Gas Inc – Ohio & PGS – Florida.

We respectfully await your decision

Yours sincerely
