Message:

VRC-99 radios will be used between 3 separate vehicles for data transfer. The 3 vehicles will be located on Overwatch property as referenced in the application. Vehicles will be no further than 700m apart. The Midland GXT-300 radios referenced in the application will allow for voice communications between the vehicles. We use these vehicles to test our software builds which are running on laptop systems inside the vehicles. The VRC-99s allows us to share data between systems. Please call me at 512-358-2818 if this exhibit needs more information.
