If ?NON? is not correct, what are my options? I can only seem to get to the Form 442 which doesn't appear to let me modify it or find out what other options are available. Is it possible to refer to our License from 1998, (0110-EX-RR-2008) or from 2006 (0096-EX-PL-2006)? I didn't put those applications in, but we're doing the same thing now as we were in those.

In response to other questions: The government agency is the US Army. We're developing software for the Prophet Program. One of their means of inter-vehicle communications is the VRC-99 radio. We need to be able to turn ours on in order to test software between the vehicles.

?identify the usage between the government and non government frequencies???..I really don't know what this means. I only know that the VRC-99B's frequency range is from 1708 MHz to 1980 MHz. As for which Channels/Frequencies it's using while in operation, I have no idea.

?are we developing government equipment in non government bands???..No, we're not developing any equipment, only software for use in the Prophet Vehicles.
