Office of Engineering and Technology

To whom it may concern,

Our company is requesting an experimental license for the purpose of demonstration of equipment to prospective purchasers, as stated in 47 CFR 5.3(G).

The frequencies requested would be used to demonstrate the voice (J3E mode) transmit and receive capabilities of the Vertex Standard VX-1700 radio unit to potential government and private sector customers for land mobile and marine use. Such demonstration would be performed by establishing brief voice contact between 2 of the units in mobile/portable configuration. We anticipate the transmit portion of any such demonstration would be less than 5 minutes in duration.

I will personally serve as the "stop buzzer" contact in case of any interference allegations, and can be reached immediately via mobile phone at 870-213-5299. We affirm that all operation will cease, in such a situation, until the interference is resolved to the satisfaction of the licensee reporting the problem.

Please see additional attached exhibit testifying to our eligibility.

Sincerely,

Thomas Ivy
Vice President
