

The five remote stations will be temporary fixed locations (transportable). These five locations will vary during the two year Experimental License. All locations are located within the 15 kilometer radius.

There are a total of ten possible test locations for the Remote Station Radios. All are located within the 15 kilometer testing area

For example using the ten possible remote station locations, Remote Tower 1 may be tested for up to six months and then the equipment moved to Remote Tower 2 (a different remote tower location also located within the 15 kilometer testing area).
