

PHAZR Inc. is a US Company formed and focused on 5G radio network infrastructure development. PHAZR has developed industry's broadest portfolio of 5G Millimeter wave solutions covering 3.5 GHz, 28 GHz, 24 GHz and 37-40 GHz bands.

The goal of this experimental license is to test Quadplex technology that pairs high-band millimeter wave spectrum for downlink with mid-band spectrum for the uplink to uniquely enable high-performance, cost-effective, and power-efficient 5G systems.

Our plan is to have these systems fully tested for commercial launch starting in 2019 making sure the United States win the 5G race and reap the economic and civic rewards of being the first to deploy 5G.
