

Exhibit 1

Experimental License Request

Introduction

By the instant application ("Application"), Phelps Dodge Chino, Inc. ("Applicant") requests Commission authority for a one year license for the facilities specified herein. The Applicant has a remote business office located in Silver City New Mexico. It is the Applicant's desire to connect this remote office into their normal business LAN for high speed data and voice transport. The internet services in the Silver City area are provided by a wireless ISP that has a number of 5.8 GHz spread spectrum systems interconnecting their client side access points. To prevent harmful and disruptive interference to this public service, the Applicant would like to experiment with Motorola's PTP54400 point to point bridging system operating in the 5.4 GHz band to provide this LAN to LAN connectivity. .
