Subject: Additional Information Request

---

Message:

Hi,

We are working on providing the additional requested information to you, but needed a few clarifications on the requests below:

1) You have entered two earth stations in your 442. Those are missing in the NTIA Space Record form. You need to provide earth station transmit data for them. - These stations are receive stations and present in the NTIA form under the receiver category. I did not find a specific field in the 442 portal to specify them as receive stations so I denoted them as transmit stations with no transmission power. Please specify the correct way to go about this.

2) Remove the non-US ground Earth Station Transmit data. We don't grant foreign Transmit stations. - Do we need to remove them from the NTIA form as well as the ITU API? I haven't included them in the 442.

3) If the Receiver location is overseas, provide the state and the country. - Does this have to be provided in the 442 form? It is provided in the NTIA form.
