Dear Sirs:

Please consider this as our 6-month progress report for our experimental license, File Number 3735-EX-PL-93, in accordance with the license granted in September 1993. During this time period we have experimented with the use of this license at two locations.

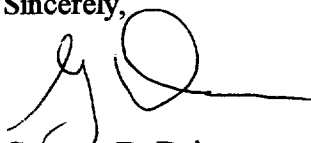

On October 23, 1994 a test was conducted in Princeton, N.J. using two open FM frequencies. The purpose of the test was to re-broadcast information inside a building. Four (4) watts of power were used during this test. The emission did not leak outside the perimeter of the structure due to low power limitations. The broadcast lasted approximately 8 hours and the performance was considered excellent.

Our most recent test was conducted on January 29, 1995, for the NFL in Miami, Florida inside the Joe Robbie Stadium. At this event we re-broadcast television audio from NBC and radio broadcast from CBS into the stadium. We tested four (4) open FM frequencies in the Miami, Florida area. Four (4) watts of (ERP) power were used. The purpose of this test was to see if fans attending a sporting event inside an enclosed arena could receive an authorized conventional re-broadcast over open FM frequencies.

The emission did not leak outside the perimeter of the structure due to low power limitations. The broadcast lasted approximately 3 hours and the performance was considered excellent.

We will inform you of any additional uses of the license in the next 6-month report.

Sincerely,

Gregory D. Deieso
CEO
