

EXHIBIT 1

Explanation of Application

Port Authority of New York and New Jersey is seeking Commission authorization to test short-range radar systems at Raytheon plant in McKinney, TX, for the purpose of determining if the systems are suitable to add to Perimeter Intrusion Detection Systems at LaGuardia and John F. Kennedy Airports in New York; and Newark and Teterboro Airports in New Jersey. Potentially, these radars will be networked with other systems to enhance security at the airports.

This proposal is part of a major project that Applicant is working on in support of the United States Government's Homeland Security Initiative, and is critical to the security of airports named above.

Applicant respectfully requests that the Commission process and grant this application as expeditiously as possible.
