

This is a request for modification of the Experimental License 0301-EX-PL-2015, call sign WH2XWI. The reason for the request is that the actual frequency range required by the Globalstar STX-2 simplex modem, which is one of the transmitters included in this license, is smaller than the range that was originally requested.

We requested and were granted, the range of 1610.73 -1620.57 MHz.

The actual frequency range used by the Globalstar STX-2, is a subset of the granted range: it is 1615 -1617.5 MHz.

Please modify the license to reflect this actual range used.
