Hi Mr. Ghaffari

We hope to test at various major sports venues with the highest amount of RF interference. And these are situated throughout the US. Example Texas, New York, LA, etc. This is a very small wireless body pack transmitter that we hope to test, that we hope will be capable of working without intermod, desense and other RF interference.

Thanks

Allen

Mr. Kool,

No problem. One more thing, why do you need a nationwide authority?
