

This license requests is for the experimental license pertaining to the soon to be unlicensed frequency of 5.470 Mhz - 5.725 Mhz. We are a WISP in the state of Kentucky, located in Lexington. We are looking to gather some numbers and run some tests for this frequency, along with the operation of the Doppler 18 Radar that is approximately 2-3 miles from our primary POP. They are also a customer of ours, so communication amongst them will not be a problem. Given the RF noise in 5.8 Ghz and 5.3 Ghz we are extremely interested in moving into this frequency, and also we are looking at the 6Ghz and 18Ghz licensed frequencies.

Thanks and let me know if any further information is needed.
