

**Description of Experimentation**

Rajant Corporation (“Rajant”) respectfully requests issuance of a Special Temporary Authority (STA) experimental license using the equipment and operating parameters set forth in Application File No. 1188-EX-ST-2015

Rajant seeks to test its products in the 3650-3670 MHz band at the Indianapolis Motor Speedway during the 2015 and 2016 INDY 500 season, consistent with the duration and operating terms of any STA granted.

Rajant wants to test the equipment to determine the optimum configuration of base stations and overall operation of its 3.6 GHz network, consistent with the requirements of its Part 90 license in this band.

Currently, Rajant plans to test the equipment during at least one INDY 500 event and during off-times, which will be determined based on track availability.
