

Raytheon Missile Systems
Experimental License Modification Application
Call Sign: WF2XBX
File Number: 0009-EX-CM-2016

Explanation of Modification Requested

Raytheon Missile Systems (Raytheon) recently renewed WF2XBX. Raytheon is grateful for the grant of the renewed authorization. Upon review of the Commission's grant, it became apparent that there are two key pieces of information that need to be updated on the license.

First, the spectrum to be used will be limited to 1780-1850. Raytheon will not be using any frequencies outside of that band, and so it is deleting 1755-1780 from its license.

Second, the program using these frequencies is only operating from Raytheon Missile Systems. As a result, Raytheon wishes to update the stop buzzer point of contact to:

Thomas J. Fagan, Spectrum Manager
Raytheon Missile Systems
(520) 794-0227 (office)
(520) 465-7087 (mobile)
tjfagan@raytheon.com

Raytheon requests that OET assist in making these updates to its license, WF2XBX.

Should there be any questions about this application, please contact Anne Cortez (520) 344-8525 or alc@conspecinternational.com.
