

**SUBJECT: REQUEST FOR STA TO OPERATE PROXIM TSUNAMI GX800
MICROWAVE EQUIPMENT
JUNE 1, 2012**

Raytheon Network Centric Systems (Applicant) has an immediate need to establish microwave communications at the New Mexico State University Chihuahua Desert Range Research Center. The microwave is required for data transport between surveillance test and demonstration sites and the operations center. Please be aware that antennas for 10.705 GHz and 11.235 GHz will not be the same as antennas for the other four frequencies, and thus will have different power inputs and outputs.

Applicant understands that grant of this application will be on a secondary basis to other authorized users on the same or adjacent frequencies.

This operation will be coordinated with Area Frequency Coordinator, White Sands Missile Range prior to test and demonstration.

The point of contact for interference matters is Mark Volpe at 727 512 0305.
