Brief write-up description by D. Leppold from telecon with Paul Benton on 10/30/2003 am.

Raytheon is performing an experimental integration of commercial satellite network equipment (LINKWAY 2100) with a newly proposed Raytheon ground data system. The Linkway 2100 will provide the satellite link necessary to demonstrate the usefulness of the connection between Raytheon network (ground) equipment and the TELSTAR 7 satellite. Testing will be performed from October 31 thru November 12, 2003.

See associated file: Ray demo LINKWAY spec excerpts.doc for information on the LINKWAY 2100 equipment.
