

It is our intention to file a Notice of Proposed Rulemaking (NPRM) with the Federal Communications Commission, adding the frequency of 87.9 MHz to 90.17 and 90.242, as a supplemental Travelers Information Station channel. The operation of the three stations listed in Item 13 will enable us to gather technical and operational data pertinent to this filing. It is anticipated that all experiments will be completed within 12 months, at which time the aforementioned transmitters will be removed from service pending Commission action on the above NPRM. In order to prevent interference to any licensed station operating on an adjacent channel, all experiments will be conducted outside the primary contour of Channel 6 (TV) or Channel 201 (FM) facilities.
