Subject: 0485-EX-CR-2018 pre-coordination data request

Message:

Hello,

I received your request for FAA coordination regarding the two frequencies identified and have a couple of questions:

1. ELS did not, as it typically does, alert us that FAA coordination was required for these frequencies, and as far as I can tell, we did not need to obtain coordination with our prior renewals of this license. So we've become aware of the need late in the game, as the license expires on Saturday. We're currently pulling together the coordination request, but our experience with other licenses has been that obtaining the approval takes awhile. Can we continue to operate while the renewal is pending?

2. We're also seeking a modification for this license. With other licenses, OET has instructed us that we need to file both a renewal and a modification. However, the proposed modification is a change in frequency, from 136.85 to 131.725 MHz. Does the new requested frequency also require FAA coordination? And do we still need to seek FAA coordination for 136.85 MHz if we're also submitting a modification application to discontinue use of that frequency?

Thanks,
Courtney Miller
