RE: Omaha Nebraska Experimental Permit

As of 11.30.1992 the Omaha Nebraska experiment has not yet been completed, I would like to request additional time to conduct further experiments under experimental license number KI2XAD. To date there has been no interference to any licensed operators in the Metro Omaha area. With this in mind I would respectfully request an additional time of 3 year in which to further conduct my experiments if the FCC rules permit, as well as a power increase to 10 watts per channel. If the power increase is not permitted please extend the license 3 years.

I filed for this application back in 1991 file number 2016-EX-PL-91, as set forth in this application, if needed please refer back to the application for details. I need to continue this experiment. In addition to the existing experiments I would also like to begin further work in the areas of analog to digital and digital to analog video and audio technology. The perfection of this technology will definitely enhance and allow further utilization of the existing radio frequency band.

If any one at the FCC has further questions please feel free to call at any time.

Sincerely

Ronald J Abboud
