Message:

The request for an increase of frequency is from the amount of local noise being generated in the 472-479 KHz range. I have also requested additional modes of operating to be tested. I have sent a screen shot photo to Tony showing the level of noise for my location. If the 495 KHz upper request is to close to 500 KHz I am requesting 490 KHz.

Thank you
Ron Douglass
