

Correspondence 101363 Response

The yellow area in the following diagram indicates the hazard zone maximum range of 164 m, specified in the Swedish report for the rotating array referenced to an unrestricted environment in the IEEE C95.1:2019 standard. The blue indicates the additional unrestricted hazard zone when the array operates in non-rotating, stop and stare mode.

Saab will employ blanking sectors over the other test pads, the building and road to ensure there are not any exposure issues to the general public. The blue and yellow zones outside the facility fence are Saab owned property that is swamplands that are inaccessible to the public. Saab will also employ higher elevation transmit beams whenever possible to minimize the effective radiated area. The boundary of this area will be demarcated with the appropriate signs and chains.
