

EXHIBIT No. 1

SAIC is under contract (DAAB07-98-D-H752) to the U.S. Army (Night Vision and Electronic Systems Directorate, Ft. Belvoir) to productize and build several copies of the IUMSS (INSCOM Unattended Sensor System) system. We have delivered 5 processor units and are currently building 10 additional units. We test the systems before delivery and we will be performing maintenance for them over the next year on the delivered units. After that we may be upgrading and improving the systems, which will also require system testing using the radios.
