

EXHIBIT 1

Date: February 28, 2002

Applicant:

Sarnoff Corporation
CN 5300
Princeton, NJ 08543-5300

Narrative Statement:

The Sarnoff Corporation has a program to develop a portable satellite terminal system to be used for uplinking video to geosynchronous communications satellites. The experimental license currently being applied for would allow the use of Sarnoff's existing Ku-band satellite earth station for testing the suitability of video compression techniques over a satellite circuit. A high gain antenna and the minimum effective radiated power would be used to develop acceptable signal-to-noise levels and bit error rates.

Testing would begin immediately upon issuance of said license and continue for approximately one year.

Project: Portable Satellite Terminal II

Contract Number: XXXXXXXXXXXX
