Message:

Mr. Ghaffari,

In answer to your question Would it be possible to lower the number of tags from 500 units to 50 units?, the reason we cannot reduce the number of units to 50 is that this is essentially our test site to determine if there are any issues with representative deployments of the hardware units and software infrastructure. Unfortunately we need a significant number of units that are representative of a typical deployment in order to make sure the system is bug free (software tends to work great with a small number of units, however bugs tend to arise as more units are added to the system). We are using this installation for testing and we fully intend to pursue full FCC product certification once we have proven the viability of the system in the real world environment and use case. I hope this answers your question. Please contact me if you need any further clarification. Thank you very much.
